

SST and fluxes : users feedback summary

OSTIA :

- Analysis uses NRT SST data retrieved over lakes as no lake specific satellite retrievals are available in NRT. Any plans?
- No Lake Victoria obs in SEVIRI. Any plans?
- Better uncertainty estimates required to make better use of observations.
- We are now in (or getting towards) a position where we would like to receive **skin-SST** and do the correction to sub-skin ourselves.
- We also aim for robustness to move as many of our data feeds as possible from ftp to EUMetcast, currently get MetOP AVHRR.

SST and fluxes : users feedback summary

- Need for a forum :
 - Exchange of pieces of code
 - Exchange between users/providers
- Need for long time series of composite products.
- More integration of other parameters (OC, SSH, ...).
- Need for better capacity building for EUMETCAST usage.
